

# Arrays : Interview Problems

Apr 8, 2022

## AGENDA:

- 2 - 3 very interesting problems :D

Q.

Given a matrix of size  $N \times N$ , print the boundary of the matrix in clockwise direction.

5	10	13	18	7
3	2	6	4	3
2	2	1	7	8
0	5	10	0	9
1	12	20	1	3

Inp =

(0,0)									
5	10	13	18	7					
3	2	6	4	3					
2	2	1	7	8					
0	5	10	0	9					
1	12	20	1	3					

Out =

5 10 13 18 7 3 8 9 3 1 20 12  
1 0 2 3

$$\begin{array}{l}
 \begin{cases} \text{0th row} \\ \text{N-1th column} \\ \text{N-1th row (reverse)} \\ \text{0th column (reverse)} \end{cases} \rightarrow O(N) \\
 \begin{cases} \text{0th row} \\ \text{N-1th column} \\ \text{N-1th row (reverse)} \\ \text{0th column (reverse)} \end{cases} \rightarrow O(N) \\
 \begin{cases} \text{0th row} \\ \text{N-1th column} \\ \text{N-1th row (reverse)} \\ \text{0th column (reverse)} \end{cases} \rightarrow O(N) \\
 \begin{cases} \text{0th row} \\ \text{N-1th column} \\ \text{N-1th row (reverse)} \\ \text{0th column (reverse)} \end{cases} \rightarrow O(N)
 \end{array}
 \underbrace{\quad\quad\quad\quad\quad}_{O(N)}$$

$4N - 4$  nos. are printed  
 $O(N)$ .

## Approach / Observations

1.

	0	1	2	3	4
0	5	10	13	18	7
1	3	2	6	4	3
2	2	2	1	7	8
3	0	5	1	8	9
4	1	12	20	1	3

$N \times N$

$$\begin{cases} i=0 \\ j=0 \end{cases} \quad \downarrow \quad (j++)$$

$$\begin{cases} i=0 \\ j=4 \end{cases} \quad \downarrow \quad \begin{array}{l} (i++) \\ i=4 \\ j=4 \end{array}$$

$$\downarrow \quad \begin{array}{l} i=4 \quad j-- \\ j=0 \end{array}$$

$$\begin{cases} i=0 \\ j=0 \end{cases} \quad \leftarrow \quad i--$$

- \* 4 legs in the boundary.
- \* Print each leg.

\* Quiz      No. of elements in each leg of the boundary =  $N-1$

\* No. of elements in each boundary =  $N-1$

\* Once we are done with printing 1st leg, the ending value of previous leg will be start value of next leg.

$N = 10$   
 $i = 1$        $i < 10$   
**while ( $i < N$ ):**  
 |       $i += 1$        $i$   
**print( $i$ )**

$i = 10$   
 $i$  and 10.

int  $i$ ;  
 for( $i = 1$ ;  $i \leq 10$ ;  $i++$ )  
 // -  
 print( $i$ )  
 11

### Pseudo-code

$N=1$

// Print 1st leg  
 $i = 0, j = 0$   
 for - in range( $N-1$ ):      // Run this  $N-1$  times.  
   print(mat[i][j])  
   j++

//  $i = 0, j = N-1$

// Print 2nd leg.

for - in range( $N-1$ ):  
   print(mat[i][j])  
   i++

//  $i = N-1, j = N-1$

for - in range( $N-1$ ):  
   print(mat[i][j])  
   j--

//  $i = N-1, j = 0$

```

for - in range (N-1) :
    print (mat[i][5])
    i-- :

```

// i = 0 , j = 0

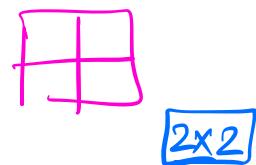

$\left\{ \begin{array}{l} i+=1 \\ j+=1 \\ N=N-2 \end{array} \right.$ 
} → Takes us into 1 step inner.

	0	1	2	3	4
0	5	10	13	18	3
1	3	2	6	4	3
2	2	2	1	7	8
3	0	5	1	8	9
4	1	12	20	1	2

$$N \times \underline{N} \rightarrow N-2 \times N-2$$

Q. Given a matrix. Print elements in spiral order.

	0	1	2	3	4
0	5	10	13	18	3
1	3	2	6	4	3
2	2	2	1	7	8
3	0	5	1	8	9
4	1	12	20	1	2

while (N >= 1) : ← N/2

{ prev-code } // Prints outer boundary.

$\left\{ \begin{array}{l} i+=1 \\ j+=1 \\ N=N-2 \end{array} \right.$ 
→ O(N)

$$\underline{N \rightarrow N-2 \rightarrow N-4}$$

2	
---	--

if  $N \% 2 = 1:$   
print (  $\underbrace{arr[N//2]}_{\downarrow \text{center element.}} \ [N//2]$  )

$$\begin{aligned} N/2. \\ 5/2 &= \underline{\underline{2}} \end{aligned}$$

Q. Max no. of consecutive 1's.

Given a binary string, at most replace a 0 with a 1. Find max no. of consecutive 1's in the resultant string.

Binary string, "01001110111100"  
→ ⑧

Quiz

0 1 1 1 0 1 1 0 1  
|| | | || → || | | ||  
4 5 6 3.

Ans = 6

Brute force.

Pseudo-code.

ans = 0

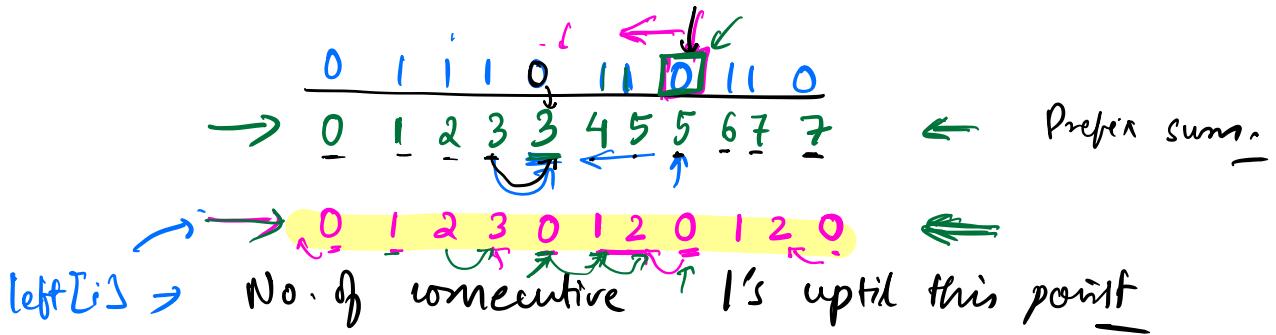

→ for i in range(0, n):

if arr[i] == '0':

{ Time consuming } { L = No. of consecutive 1's to left }  
{ R = No. of " " " " right. }  
total = L + R + 1  
ans = max(ans, total)

$O(N^2)$

$\cancel{O(N^2)}$

arr[i] == '0':  
    ↳ L =      prefix  
                        left[i - 1]

// Build the left[i] array.

if arr[0] == '0': left[0] = 0 else left[0] = 1

```
for i in range(1,n):
```

if  $s[i] == '0':$

else:

$$\text{left}[i] = \text{left}[i-1] + 1$$

*P*

✓ Reset !

$$H[i] = \boxed{A[0]}$$

A [0]

$$= \text{ord}(\alpha \cup \{\sigma\})$$

- 48

// Build the right [i] array. // suffix array.

// Handle the case i=n-1 :

for i in range(n-2, -1, -1):

if  $s[i] == '0':$

eight [i] = 0

else :

$$\text{right}[i] = \underbrace{\text{right}[i+1]}_j + 1$$

Lokesh

1

101100

1

Final answer.

$$\text{Ans} = 0$$

for i in range(n):

→ if  $s[i] == '0'$ :

• ✓  $L = \text{left}[i-1]$  }  $i == 0$  ? ○ :  $\text{left}[i-1]$

o'  $R = \text{right}[i+1]$  }  $i = n-1 ? 0 : \text{right}[i+1]$

$$\text{total} = L + R + 1$$

`ans = max(ans, total)`

if ans == 0: return len(s)

return ans.

## Corner cases

6

$$\underline{\text{ans} = 1}$$

2

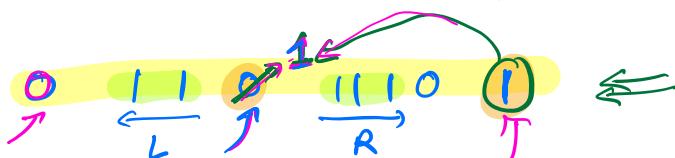

$$\text{ans} = 0.X$$

ans = len(arr)

Break till 10:40.

Q<sub>o</sub> Enhancement to the above question:

# You can replace at most one 0 with a 1, but with a 1 present in array itself.  
(Extra 1's cannot be used)

$$\text{Ans} = 6$$

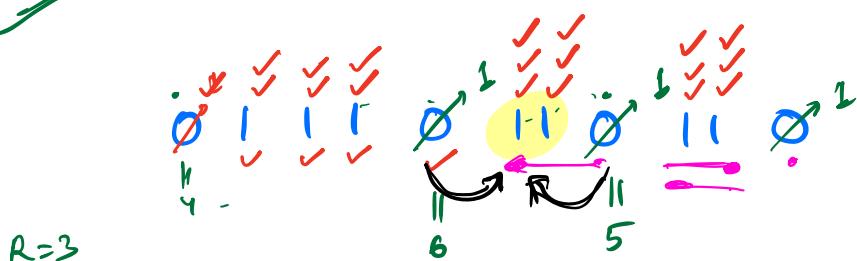

K = Count of 1's.

$$\text{Ans} = 5$$

} if  $L+R+1 \leq \text{count}$ :  
 $\text{total} = L+R+1$   
else  
 $\text{total} = L+R$ .

H.W.

arr[i] → Max. 3 times

O(N)  
3N

N \* N.  
N \* 3

O(N)

Q.3-

Given an array, count no. of triplets  
s.t.  $i < j < k$  and  
 $\underline{arr[i]} < \underline{arr[j]} < \underline{arr[k]}$ .

0	1	2	3	4	5
4	1	2	6	9	7

4	6	9	1	2	6	2	6	9
4	6	7	1	2	9	2	6	7
			1	2	7			
			1	6	9			
			1	6	7			

Q

Brute force.

3 loops.     $\text{count} = 0$

$$i - [0, n-1] \quad \leftarrow \text{Not python}$$

$$j - [i+1, n-1]$$

$$k - [j+1, n-1]$$

if  $\underline{arr[i]} < \underline{arr[j]} < \underline{arr[k]}$  :

$\text{count} += 1$

return count .

TC:  $O(N^3)$ . ✓

Expecting a  $O(N^2)$  solution  
 $O(1) \therefore \underline{SC}$

Hint: Take every element as middle element of the triplet.

→ 4 1 2 6 9 7

Total no. of triplets = ? Total no. of triplets with 4 as middle element

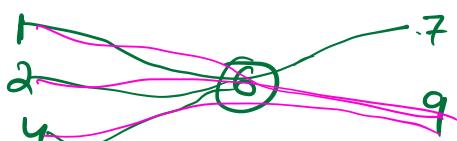

+ " ... 1 "  
+ " 2 "  
+ " 6 "  
+ " 9 "  
+ " 7 "

No. of triplets with 6 as the middle element = ?

4 1 2 6 9 7.  
↓ <6. ↑ 7. 76.

1,2,4.

9,7

$$3 * 2 = 6$$

4 1 2 6 9 7,

$$\begin{array}{r} 1 \ 2 \ 6 \\ 1 \ 2 \ 9 \\ 1 \ 2 \ 7 \end{array} \quad \left\{ \quad 3 * 1 = 3 \right.$$

4    1 2 6 9 7    0

$$0 * xx = \underline{\underline{0.}}$$

### Pseudo-code

```
sum=0
for i in range(n):
    N times.
        middle = arr[i]
```

```
count_l=0
for j in range(0,i):
    if arr[j] < middle:
        count_l += 1
```

```
count_r=0
for j in range(i+1,n):
    if arr[j] > middle:
        count_r += 1
```

ans = count\_l \* count\_r  
 $\text{sum} + \text{ans}$

~.

return sum.

$\Theta(N^2)$

\*\* Ideal solution  $\rightarrow$   $O(N \log N)$

{Segment Trees.}
